

## Case Assignment

It is an individual exercise and you have to hand it in on Fronter in the folder - **SP\_Best\_Accommdations**  
You must hand in before 6th March 2016 at 23.59

Read the case text. It is intentionally made a little complex and there is some "noise" added as well. This is to simulate a real world case, where the hard part can be to extract meaning of the case.

A zip file uploaded to Fronter, with files and models relevant to this case:

- Domain model
- Vision, goals, features (Only 3 features needed, you don't have to describe all features)
- Goals must be SMART goals
- One or more activity diagrams with swimlanes

Possibly include a small note about your assumptions.

If you have encountered any ambiguities or insufficient information from the case to move on, you can simply write that you assume certain facts. For example, "we assume that the satisfaction survey is performed yearly, and that the satisfaction level last time was 63%".
